

**An outstanding multi-leaf variety with excellent adaptation to areas where semi-dormant alfalfa varieties are grown**

### Key Features & Advantages

- ✓ Excellent forage quality with high TDN and Relative Feed Value combined with high yields for maximum nutrition per acre
- ✓ Fast early season growth and fast recovery after cutting for making the most of the growing season
- ✓ Resists major alfalfa diseases and pests, including Verticillium wilt, Phytophthora root rot, stem nematode and root knot nematode
- ✓ Good winterhardiness promotes longer stand life in its adapted area

For The Way You Farm.™

### Agronomic Traits

Fall Dormancy	6	Recovery Rate	Very Fast
Winterhardiness	5	Forage Quality	Very Good
Average Stand Life	Medium		

### Disease Resistance

Phytophthora Root Rot	HR	Bacterial Wilt	MR
Aphanomyces Root Rot	-	Fusarium Wilt	HR
Anthracoese (race 1)	HR	Stem Nematode	R
Verticillium Wilt	R	Root Knot Nematode	R

### Yield Data (from research and public trials)

### General Areas of Adaptation\*

■ General Area of Adaptation\*  
(Actual area may vary due to environmental conditions)

Fall Dormancy Rating (1 to 9): 1 = Dormant; 9 = Non-Dormant. Ratings are based on standard check varieties as established by the National Alfalfa Variety Review Board. Winterhardiness Rating (1 to 6): 1 = Most Hardy; 6 = Non-Hardy. Ratings are based on standard check varieties as established by the National Alfalfa Variety Review Board. Alfalfa Reactions to Disease and Insect Pests: HR = Highly Resistant; R = Resistant; MR = Moderately Resistant; LR = Low Resistance; S = Susceptible. Ratings and descriptions are based on research and field observations compared with products developed by the alfalfa research program from multiple locations and years. Read all bag tags and labels. They contain important conditions of sale, including limitations of warranty and remedy.
